

Summary

Technical background:

- Software architectures;
- Project Management;
- Software and Technical Lead;
- UI and UX experience;
- Front - end experience (Polymer, React, D3js, Custom Elements v1, Vanilla Javascript);
- Backend experience. (Nodejs, Asp.Net, PHP, Ruby on Rails);
- Cloud providers(Azure, AWS, Heroku, Engine Yard, Google Cloud);
- Mobile applications(Android, iOS and Hybrid);
- DevOps Experience;

I've been studying:

- Artificial intelligence;
- Voice and Image Recognition;
- Microservices, Feature Toggles, Service-based architecture;
- Kubernetes;

Specialties

- Cloud Architect
- Team Leader
- Polymer
- Custom Elements v1
- TypeScript
- Nodejs

Skills & Technologies

Programming Languages

JavaScript, PHP, C# (midd), Python (midd), Java (midd), Ruby, Bash Script, Objective - C (midd), Swift (midd), Groove (beginner), Go (beginner)

Frameworks & Libraries

React, Polymer, Custom Elements v1, Vuejs (beginner), Asp.Net MVC, Ruby on Rails, Laravel, Oval, D3js, a11y,

Application Servers & Runtimes

*Databases and Data
Warehouse
Technologies*

MySQL, MSSQL, Hadoop, MongoDB, NoSQL solutions

Development Tools

Vscode, Vim, Visual Studio, Eclipse, Andio Studio, Xcode, IntelliJ, Atom, Sublime

QA Tools

Mocha, Chai, Jest, Jasmine, Karma, TestCafe

Operating Systems

Mac OS X, Linux

Others

Jenkins, Kusto Query Language, Azure, AWS, Electron, Nwjs, Google Chrome Extensions

*Version Control
Systems*

Git Advance user

Education

- Bachelor degree, Informatics, Varna

Experience

Asian Absolute

Dates:
August 2018 - Present

Asian Absolute is a world wide translation with offices in Australia, UK, China, Panama and Bulgaria.

Position:
**Azure Solution
Architect**

Responsibilities within the project

- Azure Solution Architect. Working on Multi - tenant architecture and feature toggles
- Project and team management. Leading two developers
- Helping with different devops tasks

Technologies involved:
**Azure, Azure Web
Services, Azure Log
Analytics, LogRocket,
Trello, Grafana**

MailHelper

Dates:

December 2018 - Present

Position:

Open source Founder

Technologies involved:

Nodejs, Custom Elements v1, Lerna, Webpack, Karma Express, Gmail API, Yarn

MailHelper is an independent project. MailHelper is a personal assistant that is able much easier to create Gmail Label and Filters. He's a founder of the project

Repository: <https://github.com/dimitardanailov/gmail-helper>

Public URL: <https://fir-playgrounds.firebaseio.com>

Responsibilities within the project

- Research and Development
- Using the latest technologies

Consento

Dates:

02.2019 - 03.2019

Position:

Full Stack Developer, Freelancer

Technologies involved:

MongoDB, Express, node organic and oval

Consento.bg is a web and mobile assistant in healthcare industry

Responsibilities within the project

- Software development
- Creating UX / UI mockups

Camplight

Dates:

10.2018 - 01.2019

Position:

Nodejs Developer

Technologies involved:

MongoDB and Express

[Camplight](#) is one of the freelancer IT leaders at Bulgaria. He has worked on Trello Bot(<https://assista.camplight.net>). Assista is about Time tracking of each project. His mentor has been: [Boris Filipov](#)

Responsibilities within the project

- Onboarding with [node-organic](#)

Sashido

Dates:
08.2018 - 11.2019

Position:
Nodejs Developer

Technologies involved:
Nodejs, TypeScript, MongoDB, tus.io, AWS S3, OpenShift and Kubernetes

SashiDo is one of the biggest Parse cloud Providers. SashiDo.io has clients and datacenter located in Tokyo, Montreal, Paris and Sydney.

Responsibilities within the project

- His role has been to make a microservice solution which is responsible to export millions records from Sashido Datacenters to AWS S3.

15togo

Dates:
06.2018 - 08.2018

Position:
Mobile Developer

Technologies involved:
Objective - C, Android, Java, Blockchain, Firebase, DevOps

15toGO is the first Decentralized Social Travel Network and Marketplace where you MATCH with new people to travel with, BOOK hassle-free and TRAVEL for less. My mentor was: [Daniel Radev](#)

Responsibilities within the project

- Objective - C Developer
- Research and implement new technologies to solve specific product requirements. Examples: AWSS3TransferUtility, Firebase Dynamic Links, Visual Studio App Center, Firebase Crashlytics
- Has been a mentor of middle level Android Developer

Active Brands

Dates:
12.2017 - 04.2018

Position:
Technical Architect

Technologies involved:
Waterfall, Project Management, People Management, Salesforce Commerce Cloud

15toGO is the first Decentralized Social Travel Network and Marketplace where you MATCH with new people to travel with, BOOK hassle-free and TRAVEL for less. His mentor has been: [Daniel Radev](#)

Responsibilities within the project

- Salesforce Commerce Cloud is using Rhino like a “transpiler”. Rhino transforms JavaScript to Java Spring source code and he has a lot of restrictions. Rhino doesn’t support EcmaScript 6 and they successfully have created boilerplates on TypeScript. These improvements increased the motivation in his backend team.

- he has created different technical diagrams
- He has worked two weeks on R&D task about creating a react boilerplate component who includes jQuery and React (<https://github.com/dimitardanailov/react-jquery-component>)

MentorMate

Dates:
11.2015 - 11.2017

Position:
Software Architect

Technologies involved:
Agile, Polymer, D3js,
Team Management,
Objective - C, Google
Chrome extensions,
Nwjs.io, Angular, Zend
Framework

June 2016 - October 2017:

He has spent fifteen months of his life on working for US Education System.

2016 the team size have been between 80 members (Leads, Developers and QAs). October 2017 the team grows to 200+ members.

Major project accomplishments:

- Between January 2017 and April 2017 he has managed a team and the members have been: Front - end Developer, 2 QA and BA and the technology stack has been: Polymer and D3.js. They have created a complex tool to draw different shapes on the coordinate system.
- Between March and May (2017) he worked directly with his client at USA. His tasks were: (Helped with communication between teams in US and Bulgaria, Helped with different release tasks in this period, Was part of different software architecture meetings with subject - Improvements for the next testing window.)
- Since June 2017, He was a Team Lead. His team was: Front - end developer, 2 iOS Developer, 4 QA and one BA. Scope of the project was creating a secure browser environment for the student testing window at US. Technologies were Node webkit (Nwjs), Objective - C and Chromebook Application. They had a communication channel with the Apple Engineer team at San Francisco. He has been the main person from BG side in these communications.
